

369. Why do most wall-hung urinals Not require a trap?

- (a) They are designed to have an integral trap
- (b) Because such fixtures seldom receive solid waste
- (c) Traps are already provided down the soil pipe
- (d) Siphonic action that occurs in wall-hung urinals during flushing prevents the usage of traps

370. The overflow passageway from a fixture must be connected to what portion of the plumbing system?

- (a) Bottom side of the fixture trap
- (b) The inlet side of the fixture trap
- (c) The upper side of the fixture trap
- (d) The outlet side of the fixture trap
